

HowTo

INSTALL GSCUSTOM.BUL INTO QUICKLOAD

The steps below are probably more complete than what it needs to be, but sometimes one asks for the file and has no idea how to do it, so we try to be as complete as possible.

1. On your desktop

- Left double click on *My Computer*
- Left double click on *Local Disk (C:)*
- Left double click on *Program Files*
- Left double click on QuickLOAD
- Left double click on *data*
- Double left click on *bullets*
- Left click once on `gscustom.bul`
- Hit the delete key and confirm
- Leave the window open

2. Open the downloaded zip-file containing the `gscustom.bul` file.

- Drag and drop the `gscustom.bul` file into the window where you deleted the old file.

3. If you open QuickLOAD and it does not display the new bullet file, you have to select it.

- Left click on "Data: Add, Change, Load, Save"
- Hover the mouse over "Projectile / Bullet Data and select "Load a Bullet File" from the drop down menu
- A window opens with several areas to it but there are two larger central areas. The left side one contains a list of all the manufacturers files. Browse the list and click on `gscustom.bul`
- In the top right corner of the window, click on OK
- The window closes
- In the QuickLOAD main window, look for the panel titled QuickLOAD V.3.6 Cartridge Dimensions
- Under QuickLOAD V.3.6 Cartridge Dimensions You will see "Selected Bullet" and to the right of it, `File:\gscustom`
- Select the bullet from the drop down menu
